KEYWORDS: anagenetic – cladogenetic
phylogenetics – speciation – splitting

INTRODUCTION

In a previous review appearing in the *Journal of the Linnean Society* (Vaux, T. Morgan-Richards, 2016), we considered the history and meaning of the terms ‘anagenesis’ and ‘cladogenesis’. We observed that the meaning of these terms has changed over time, and that modern usage of these terms has become highly varied across disciplines and ambiguous. We concluded that the terms anagenesis and cladogenesis were not needed to describe evolutionary change or species classification, and that they potentially hamper communication between disciplines. For example, some studies define ‘anagenesis’ as evolutionary change within a species (Johnson, 2012; Hunt, 2013; Lister, 2013), whereas others consider the term to be synonymous with ‘speciation’ (Ricklefs, 2004; Theriot et al., 2006; Nordenstam & Bokma, 2008; Pearson & Ezard, 2014). Variation in the usage of these terms between disciplines is obvious. For
